Dear Sir or Madam

When I started my DevOps journey it started with Vagrant. I remember how excited I was that I could try different things. I used it extensively to build chef-teamcity-cookbook. During my microservice journey I also had ideas about how would one do service discovery, handling secrets and why do I have to implement things in may different formats (Chef, Puppet, AWS, Docker).

HashiCorp has always interested me, because I believe in the products you build. I would love the opportunity to deep dive. Security these days is very important and an area that I would love to grow in. Vault seems to be revolutionary and something I believe in.

Learning from and helping engineers is something I strive for.

Please allow me to highlight my key skills:

- I have a great passion for technology. It is important to keep evaluating new ideas.
- I am a strong believer in Lean methodologies.
- I love trying out new languages. Even if it takes me longer as I get older.
- I believe in the ideas and concepts behind DevOps and have successfully introduced it at places of work.
- I am a fun and comedic person, I make sure the we all have fun working.

The enclosed resume expands on my qualifications and experience.

Thank you for your time and consideration.

Sincerely,
Alejandro Falkowski
